VerifiableAssemblyLoader (Dwyer.JitIlVerification.VerifiableAssemblyLoader.html)
- Dwyer.JitIlVerification (Dwyer.JitIlVerification.html)

Provides a **scoped assembly loading** with the same semantics as `AssemblyLoadContext` (<https://learn.microsoft.com/dotnet/api/system.runtime.loader.assemblyloadcontext>). Any assemblies loaded with this context will be checked for type/memory safety issues. Any unverifiable methods will throw an exception upon invocation.
