Classes

▼ Filter by title

VerifiableAssemblyLoader (Dwyer.JitIlVerification.VerifiableAssemblyLoader.html)
- Dwyer.JitIlVerification (Dwyer.JitIlVerification.html)

Provides a **scoped assembly loading** with the same semantics as `AssemblyLoadContext` (<https://learn.microsoft.com/dotnet/api/system.runtime.loader.assemblyloadcontext>). Any assemblies loaded with this context will be checked for type/memory safety issues. Any unverifiable methods will throw an exception upon invocation.

Class VerifiableAssemblyLoader

Provides scoped assembly loading with the same semantics as AssemblyLoadContext (https://learn.microsoft.com/dotnet/api/system.runtime.loader.assemblyloadcontext). Any assemblies loaded with this context will be checked for type/memory safety issues. Any unverifiable methods will throw an exception upon invocation.

Dwyer.JitIlVerification (Dwyer.JitIlVerification.html)

Inheritance

Inherited Members

- object.GetType() (https://learn.microsoft.com/dotnet/api/system.object.gettype)
- object.MemberwiseClone() (https://learn.microsoft.com/dotnet/api/system.object.memberwiseclone)
- object.ReferenceEquals(object, object) (https://learn.microsoft.com/dotnet/api/system.object.referenceequals)
- object.ToString() (https://learn.microsoft.com/dotnet/api/system.object.tostring)

Namespace: Dwyer (Dwyer.html).JitIlVerification (Dwyer.JitIlVerification.html)

Assembly: JitIlVerification.dll

Syntax

```
public class VerifiableAssemblyLoader
```

Constructors

VerifiableAssemblyLoader()

Initializes a new instance of the VerifiableAssemblyLoader (Dwyer.JitIlVerification.VerifiableAssemblyLoader.html) class.

Declaration

```
public VerifiableAssemblyLoader()
```

VerifiableAssemblyLoader(bool)

Initializes a new instance of the VerifiableAssemblyLoader (Dwyer.JitIlVerification.VerifiableAssemblyLoader.html) class with a value that indicates whether unloading is enabled.

Declaration

```
public VerifiableAssemblyLoader(bool isCollectible)
```

Parameters

Type	Name	Description
bool (https://learn.microsoft.com/dotnet/api/system.boolean) Dwyer.JitILVerification.VerifiableAssemblyLoader	<i>isCollectible</i>	Whether this context should be able to unload.

VerifiableAssemblyLoader(string, bool)

Initializes a new instance of the VerifiableAssemblyLoader (Dwyer.JitILVerification.VerifiableAssemblyLoader.html) class with a name and a value that indicates whether unloading is enabled.

Declaration

```
public VerifiableAssemblyLoader(string name, bool isCollectible)
```

Parameters

Type	Name	Description
string (https://learn.microsoft.com/dotnet/api/system.string)	<i>name</i>	The display name of the load context.
bool (https://learn.microsoft.com/dotnet/api/system.boolean)	<i>isCollectible</i>	Whether this context should be able to unload.

Properties

IsCollectible

Gets a value that indicates whether this VerifiableAssemblyLoader (Dwyer.JitILVerification.VerifiableAssemblyLoader.html) is collectible.

Declaration

```
public bool IsCollectible { get; }
```

Property Value

Type	Description
bool (https://learn.microsoft.com/dotnet/api/system.boolean)	

Name

Get the name of the VerifiableAssemblyLoader (Dwyer.JitILVerification.VerifiableAssemblyLoader.html).

- Dwyer.JitILVerification

Declaration

(Dwyer.JitILVerification.html)

```
VerifiableAssemblyLoader
public string? Name { get; }
(Dwyer.JitILVerification.VerifiableAss
```

Property Value

Type	Description
string (https://learn.microsoft.com/dotnet/api/system.string)	

Methods

InstrumentAssembly(AssemblyDefinition)

Adds verification guards to all methods in the assembly. The first time that any method is invoked, it will call the verifier on itself.

Declaration

```
protected virtual void InstrumentAssembly(AssemblyDefinition assembly)
```

Parameters

Type	Name	Description
AssemblyDefinition (https://github.com/jbevain/cecil/blob/8c123e16bd0d693afc9932da85e1c9e740aa508c/Mono.Cecil/AssemblyDefinition.cs)	<i>assembly</i>	The assembly to instrument.

Load(AssemblyName)

When overridden in a derived class, allows an assembly to be resolved based on its AssemblyName (<https://learn.microsoft.com/dotnet/api/system.reflection.assemblyname>).

Declaration

protected virtual Assembly? Load(AssemblyName assemblyName)

Parameters

Type		Name	Description
AssemblyName (https://learn.microsoft.com/dotnet/api/system.reflection.assemblyname) Dwyer.JitILVerification (Dwyer.JitILVerification.html)		<i>assemblyName</i>	The object that describes the assembly to be resolved.

Returns VerifiableAssemblyLoader
(Dwyer.JitILVerification.VerifiableAss

Type	Description
Assembly (https://learn.microsoft.com/dotnet/api/system.reflection.assembly)	The resolved assembly, or null .

LoadFromAssemblyName(AssemblyName)

Resolves and loads an assembly given its AssemblyName
(<https://learn.microsoft.com/dotnet/api/system.reflection.assemblyname>).

Declaration

```
public Assembly LoadFromAssemblyName(AssemblyName assemblyName)
```

Parameters

Type		Name	Description
AssemblyName (https://learn.microsoft.com/dotnet/api/system.reflection.assemblyname)		<i>assemblyName</i>	The object that describes the assembly to load.

Returns

Type	Description
Assembly (https://learn.microsoft.com/dotnet/api/system.reflection.assembly)	The resolved assembly, or null .

LoadFromAssemblyPath(string)

Loads the contents of an assembly file on the specified path.

Declaration

```
public Assembly LoadFromAssemblyPath(string assemblyPath)
```

Parameters

Type	Name	Description
string (https://learn.microsoft.com/dotnet/api/system.string)	<i>assemblyPath</i>	The fully qualified path of the file to load.

Returns

Type	Description
Assembly (https://learn.microsoft.com/dotnet/api/system.reflection.assembly)	The loaded assembly.

LoadFromStream(Stream, Stream?)

VerifiableAssemblyLoader
([Dwyer.JitILVerification.html](#))

Loads the assembly with a common object file format (COFF)-based image containing a managed assembly.

Declaration

```
public Assembly LoadFromStream(Stream assembly)
```

Parameters

Type	Name	Description
Stream (https://learn.microsoft.com/dotnet/api/system.io.stream)	<i>assembly</i>	A byte array that is a COFF-based image containing a managed assembly.

Returns

Type	Description
Assembly (https://learn.microsoft.com/dotnet/api/system.reflection.assembly)	The loaded assembly.

LoadFromStream(Stream, Stream?)

Loads the assembly with a common object file format (COFF)-based image containing a managed assembly, optionally including symbols for the assembly.

Declaration

```
public Assembly LoadFromStream(Stream assembly, Stream? assemblySymbols)
```

Parameters

Type	Name	Description
Stream (https://learn.microsoft.com/dotnet/api/system.io.stream)	<i>assembly</i>	A byte array that is a COFF-based image containing a managed assembly.

Type	Name	Description
Stream (https://learn.microsoft.com/dotnet/api/system.io.stream)	<i>assemblySymbols</i>	A byte array that contains the raw bytes representing the symbols for the assembly.

Returns

Type	Description
Dwyer.JitILVerification Assembly (https://learn.microsoft.com/dotnet/api/system.reflection.assembly) (Dwyer.JitILVerification.html)	The loaded assembly.

VerifiableAssemblyLoader
(Dwyer.JitILVerification.VerifiableAss

LoadUnmanagedDll(string)

Allows derived class to load an unmanaged library by name.

Declaration

```
protected virtual nint LoadUnmanagedDll(string unmanagedDllName)
```

Parameters

Type	Name	Description
string (https://learn.microsoft.com/dotnet/api/system.string)	<i>unmanagedDllName</i>	Name of the unmanaged library. Typically this is the filename without its path or extensions.

Returns

Type	Description
nint (https://learn.microsoft.com/dotnet/api/system.intptr)	A handle to the loaded library, or Zero (https://learn.microsoft.com/dotnet/api/system.intptr.zero).

LoadUnmanagedDllFromPath(string)

Loads an unmanaged library from the specified path.

Declaration

```
protected nint LoadUnmanagedDllFromPath(string unmanagedDllPath)
```

Parameters

Type	Name	Description
string (https://learn.microsoft.com/dotnet/api/system.string)	<i>unmanagedDllPath</i>	The path to the unmanaged library.

Returns

Type	Description
nint (https://learn.microsoft.com/dotnet/api/system.intptr)	The OS handle for the loaded native library.

SetProfileOptimizationRoot(string)

See [Dwyer.JitILVerification](#) for more information on optimization profiles for this load context are stored.

([Dwyer.JitILVerification.html](#))

Declaration

```
VerifiableAssemblyLoader  
(Dwyer.JitILVerification.VerifiableAss.  
public void SetProfileOptimizationRoot(string directoryPath)
```

Parameters

Type	Name	Description
string (https://learn.microsoft.com/dotnet/api/system.string)	<i>directoryPath</i>	The full path to the directory where the optimization profiles are stored.

StartProfileOptimization(string?)

Starts the profile optimization for the specified profile.

Declaration

```
public void StartProfileOptimization(string? profile)
```

Parameters

Type	Name	Description
string (https://learn.microsoft.com/dotnet/api/system.string)	<i>profile</i>	The name of the optimization profile.

Unload()

Initiates an unload of this VerifiableAssemblyLoader ([Dwyer.JitILVerification.VerifiableAssemblyLoader.html](#)).

Declaration

```
public void Unload()
```

Events

Resolving

Occurs when the resolution of an assembly fails when attempting to load into this assembly load context.

Declaration

- **Dwyer.JitIlVerification**
`public event Func<AssemblyLoadContext, AssemblyName, Assembly?>? Resolving`
(**Dwyer.JitIlVerification.html**)

VerifiableAssemblyLoader
Event Type
(Dwyer.JitIlVerification.VerifiableAss

Type	Description
Func (https://learn.microsoft.com/dotnet/api/system.func-3) < AssemblyLoadContext (https://learn.microsoft.com/dotnet/api/system.runtime.loader.assemblyloadcontext) , AssemblyName (https://learn.microsoft.com/dotnet/api/system.reflection.assemblyname) , Assembly (https://learn.microsoft.com/dotnet/api/system.reflection.assembly) >	

ResolvingUnmanagedDll

Occurs when the resolution of a native library fails.

Declaration

`public event Func<Assembly, string, nint>? ResolvingUnmanagedDll`

Event Type

Type	Description
Func (https://learn.microsoft.com/dotnet/api/system.func-3) < Assembly (https://learn.microsoft.com/dotnet/api/system.reflection.assembly) , string (https://learn.microsoft.com/dotnet/api/system.string) , nint (https://learn.microsoft.com/dotnet/api/system.intptr) >	

Unloading

Occurs when the VerifiableAssemblyLoader (Dwyer.JitIlVerification.VerifiableAssemblyLoader.html) is unloaded.

Declaration

`public event Action<AssemblyLoadContext>? Unloading`

Event Type

Type	Description
Action (https://learn.microsoft.com/dotnet/api/system.action-1)< AssemblyLoadContext (https://learn.microsoft.com/dotnet/api/system.runtime.loader.assemblyloadcontext)	

- **Dwyer.JitIlVerification**
(Dwyer.JitIlVerification.html)

VerifiableAssemblyLoader
 (Dwyer.JitIlVerification.VerifiableAss
